2. המשרה מיועדת לבני שני המינים.
3. את המבחן יש להגיש עד ליום ראשון, 31.5.2026 בשעה 12:00.

בהצלחה! 😊

Part I | API testing

Instructions for answering this chapter:

Postman must be installed, and the answers should be written in it. Once finished, export the files and attach them to the answer

1. When browsing the website: <https://www.gov.il/>, there is a language component that allows the page to be loaded in different languages. When selecting a language using the language component, a request is made to the server to fetch the page in the chosen language.

Write an API test for this scenario that fetches the content of the page in English and verifies that the title of the page (title tag) is in English

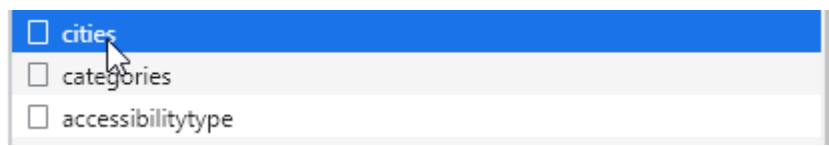

2. When navigating the website: <https://www.gov.il/>, there is a 'search' component. By entering a value in the search component, a request is sent to the server, which returns content matching the entered values. Write an API test to validate this functionality before executing the search.

Part I I | Cypress

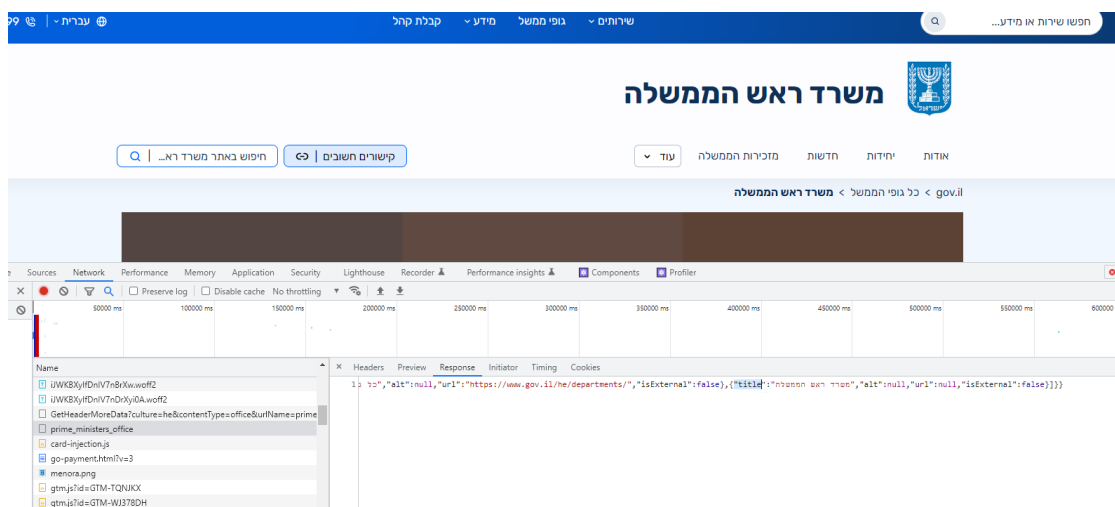

1. Install cypress on vs code.
2. Visit site Gov.il and write at least 3 automated tests for the search component in header.

Arrange your code in object oriented structure.

3. Visit [page](#) Write a test that intercept to these requests and check status code:

4. Visit [page](#), see request :

Use `cy.intercept` to change value of prop :

From: "title": משרד ראש הממשלה To: "title": office

Zip your project and attach it to the exam.

5. Log in [my.gov](#) and write how you would arrange the test cases for this page - all menu tabs

(write in Hebrew)

Part III | General Questions:

1. The following commands failed while running - what is the reason for the failure?
`const SearchInputBox = cy.get('.gLfyf');`
`cy.visit('https://www.google.com/');`
`SearchInputBox.first().type('Gov.il');`
 - ☐ The identifier of the 'search' component is incorrect
 - ☐ The search values do not exist
 - ☐ Malfunction in the order of operations
 - ☐ Error in the content of the commands
2. What will be printed at the end of the following code run?

```
int n1 = 55, n2 = 66, hint = 1;

for(int i = 1; i <= n1; ++i)
{
    if(n1 % i == 0 && n2 % i == 0)
        hint = i;
}

System.out.println("hint is: " + hint);
```

- ☐ 1
- ☐ 5
- ☐ 9
- ☐ 11

Part IV | Manual tests:

1. write test cases to the following online form :
<https://govforms.gov.il/mw/forms/PniyaToMeyda@piba.gov.il>
divide to testing **types**.
2. How should you test that all the details you fill in the form have been saved?
